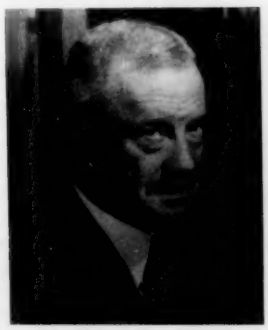
PREFACE

Reference works too often present an austere, depersonalized facade. Although one knows that they are man-made, one feels far removed from the people who labor behind the scenes to make them possible. The literature analysts and others who prepare the *Index Medicus*® today are the intellectual descendants of a brilliant and imaginative individual who conceived of a comprehensive index when none existed, and of his successors who carried on the work in spite of frequent adversities.

The first volume of *Index Medicus* was published in 1879, but the story leading up to that event began in 1865, when Dr. John Shaw Billings, a surgeon in the Civil War, was assigned to the office of the Surgeon General of the Army. Among other duties, he was given responsibility for the Surgeon General's small medical library. Perceiving that there were few if any libraries in the country holding a substantial proportion of the medical literature, Billings set about a program of expansion. Within eight years, he had built a collection of 1,800 volumes into one containing over 50,000 volumes and pamphlets. Because there was then no comprehensive medical index, he proceeded with plans to publish a catalog of the library, and a periodical index to the current literature.



John Shaw Billings, M.D.

Undaunted when public funds were not authorized for the latter purpose, he found a publisher who would assume the entrepreneurial risk, some physicians to subsidize the project, and he contributed his own time, outside of duty hours, to the selection of the articles to be indexed.

"Few words are required to demonstrate the utility of the projected serial," wrote the editors in their introduction to Volume 1. "The practitioner will find the titles of parallels for his anomalous cases. . .and the latest methods in therapeutics. The teacher will observe what is being written or taught by the masters of his art in all countries. The author will be enabled to add the latest views and cases to his forthcoming work, or to discover where he has been anticipated by other writers."

An early crisis was announced at the end of Volume 6. "With this issue," reads the notice, "the *Index Medicus* will cease to be published." The publisher, Mr. Leypoldt, had died and the managers of his estate could not continue to support the losses that the publication of the *Index* had incurred from the start. "The time has come, therefore, when neither zealous friends nor generous publishers can be allowed to make further efforts or sacrifices, and the publication is discontinued. Whether it will, in some other shape, or under some other auspices, again appear, is for the future to decide." Happily another altruistic publisher was found promptly, and *Index Medicus* continued without missing a volume.

Dr. Billings had founded well, and the *Index Medicus* always received his support even while his energies were otherwise directed. The range of his activities, both during his tenure as head of the Library and after his retirement from the Army in 1895, was phenomenal. They encompassed not only the operation of the

Fielding H. Garrison, M.D.

Robert Fletcher, M.D.

Library but also aspects of the 10th Census (1880), assisting the organizers to staff the new Johns Hopkins Medical School and hospital and designing the hospital buildings, the organization and direction of the New York Public Library, and chairmanship of the Board of Trustees of the Carnegie Institution.

From the beginning, a large part of the responsibility and credit for implementing Dr. Billings' idea was shared by his colleague and successor, Dr. Robert Fletcher, who carried on the work, with a minor interruption, from 1879 until his retirement in 1912 at age 89. He in turn was succeeded by Dr. Fielding Garrison who had earned a medical degree after joining the library staff in 1891, and had become Associate Editor in 1903. Dr. Garrison remained editor until the merger of *Index Medicus* with the Quarterly Cumulative Index in 1927. In addition to his editorial duties, he is renowned for his authorship of many historical papers and for his classic "An Introduction to the History of Medicine."

Although the *Index Medicus* underwent changes in title and frequency of issue, its publication over the past century was sustained without interruption. The Library has always been involved in indexing the literature, even when the expenses of publishing have been borne by others. Among these were private companies (F. Leypoldt, 1879-1884, George S. Davis, 1885-1894, and Rockwell and Churchill, 1895-1899); the Institute of Bibliography in Paris (1900-1902); the Carnegie Institution (1903-1926); and the American Medical Association (1927-1959).

In 1960, the National Library of Medicine (the direct organizational descendant of the Library of the Surgeon General) resumed publishing *Index Medicus* monthly under its original title, and its printing and distribution have been handled by the U.S. Government Printing Office. Also since 1960 there has been published an annual cumulation known as *Cumulated Index Medicus*. The first four annual volumes were published by the American Medical Association; since 1964 it has been published by the National Library of Medicine (NLM).

In 1960, the same year NLM resumed responsibility for publishing *Index Medicus*, the Library wrote specifications for a computerized system to aid in its preparation. Not only did the new system facilitate an improved and more timely *Index Medicus*, but it and its successors have made possible the publication of a wide variety of specialized bibliographies and permitted individual searches of the entire database of *Index Medicus* references.

Since 1970, searching of NLM's computerized bibliographic databases has been possible from remote locations. The number and size of these databases have increased, as has the ease with which they may be searched. Over one hundred thousand institutions and individuals now have access to these services.

John Shaw Billings, seeking to improve medical communication, relied on the printed word as the most available means toward that end. In this second century of *Index Medicus*, NLM continues to seek new ways to foster professional communication among those in the health community, but for the foreseeable future *Index Medicus* will play an essential role in that effort.

INDEX MEDICUS CITATION FORMAT

Since 1980, the format for journal article citations used in *Index Medicus* has conformed to American National Standard for Bibliographic References ANSI Z39.29-1977. This national standard was developed and is maintained by the National Information Standards Organization (NISO, Z39, formerly named American National Standards Committee Z39) which is accredited by the American National Standards Institute to develop consensus standards for libraries, information science, and publishing. Over fifty organizations representing the leading national libraries, information organizations, and publishers in the U.S. participate in the review and development of NISO standards. The use of these standard formats by medical publications is encouraged.[1]

Any comments or questions on the standard should be directed to the developer of ANSI Z39.29-1977: National Information Standards Organization, P.O. Box 1056, Bethesda, MD 20827.

MATERIALS INDEXED

Index Medicus contains citations to the biomedical journal literature.

In the selection of materials for indexing, the National Library of Medicine (NLM) is advised by a chartered committee of distinguished physicians, medical editors, and medical librarians. This group, the Literature Selection Technical Review Committee (LSTRC), meets three times a year to review new titles, and periodically to examine the coverage in various subject fields. The Library indexes the literature that has been judged most useful to *Index Medicus* users, but it is not possible to include every journal that might contain useful articles.

An effort is made to maintain a reasonable balance of subject matter. The inclusion of a journal should not be construed as indicating that it is considered superior to one that is not indexed. The omission of a publication does not necessarily reflect on its quality.

Original journal articles are indexed, as well as those letters, editorials, biographies, and obituaries that have substantive contents. In certain journals which cover fields other than biomedicine, only those articles related to biomedicine are selected for inclusion in *Index Medicus*.

Some journals that are published in a foreign language are also published in English translation, but *Index Medicus* cites only one source. This is almost invariably the original foreign language publication because it is available earlier and is the ultimate source of information concerning the author's intent. For up-to-date information about the availability of English translation journals, particularly Consultants Bureau translations of Soviet journals, a medical librarian should be consulted.

A few medical journals publish several editions, intended for different countries or different groups of readers. *Index Medicus* cites only one edition – usually the one that is most widely distributed in the United States. Although the editors of some of these journals assure that the citation for the edition that is indexed is correct for all other editions, there are other journals for which this is not true. For this reason, the page and issue numbers included in the *Index Medicus* citations may not be helpful to the readers of variant editions of such journals.

Currently, the journal title abbreviations used in *Index Medicus* are formulated according to the rules of the American National Standard for Information Sciences—Abbreviation of Titles of Publications, ANSI Z39.5-1985,[1] except for the treatment of part or section designations and the omission of special characters and symbols and hyphens in compound words. Title abbreviations formulated under earlier guidelines have been retained in a few cases.

For the abbreviation of any specific journal cited in *Index Medicus*, see the *List of Journals Indexed in Index Medicus (LJI)* which is provided with the January issue of *Index Medicus* and in the annual cumulation. The *LJI* is also available separately from the Government Printing Office (see the list of National Library of Medicine publications inside the front cover of *Index Medicus*).

THE INDEXING OPERATION

Materials selected for inclusion are indexed by highly trained literature analysts. The content of each piece is described by assigning terms selected from *Medical Subject Headings (MeSH)*, the Library's controlled vocabulary of technical terms, consisting of an alphabetic list of headings as well as hierarchical tree structures. *MeSH*® is published as a supplement to *Index Medicus* and appears with the January issue; it is reproduced in its entirety in *Cumulated Index Medicus*. Additional copies of *MeSH* may be purchased from the Government Printing Office (see the list of NLM publications inside the front cover of *Index Medicus*).

In indexing, the analyst assigns as many subject headings as are necessary to describe adequately the content of each article. Each journal article is cited in *Index Medicus* under only those subject headings that represent the most important concepts of the article. All subject headings, including those representing more peripheral concepts are stored in MEDLINE®, the Library's computer-based file of citations, for use in machine retrieval.

In *Index Medicus*, citations are published only under terms appearing in *MeSH*. If the medical concept sought is not a main heading in *MeSH*, the MeSH equivalent must be found. For example, citations on German measles would appear in *Index Medicus* under its MeSH equivalent, RUBELLA. Many MeSH equivalents are printed in *MeSH* and *Index Medicus* as *see* references. When materials are indexed for *Index Medicus*, the most specific terms available in *MeSH* are used. Thus, if an article were concerned with aortic coarctation, it would be indexed under that term, rather than the broader HEART DEFECTS, CONGENITAL. Under the latter term, one would find only: (a) articles dealing with congenital heart defects generally; (b) those that deal in a very general way with a large number of named congenital heart defects; and (c) those that deal with specific congenital heart defects that have not been separately listed in *MeSH*.

The user who is interested in one concept may find that the broader term is also worth examining for articles of possible interest. Although one may be interested primarily in the etiology of aortic coarctation, reports on the general subject of the etiology of congenital heart defects may be useful. The user who wants information on some aspect of therapy for congenital heart defects in pediatric practice would certainly want not only the general materials that would appear under HEART DEFECTS, CONGENITAL, but also those concerned with specific congenital heart defects.

Because it is impossible to group together all terms directly or indirectly related to a particular concept, the following should be considered when searching this bibliography:

1. Direct form of a term (LUNG ABSCESS)
2. Inverted form of a term (ANEMIA, HEMOLYTIC)
3. Noun form (LIVER; KIDNEY; BRAIN)

[1]American National Standards Institute. American National Standard for Information Sciences—Abbreviation of Titles of Publications, 1985.

4. Adjective form (HEPATIC VEINS, CEREBRAL REVASCULARIZATION)
5. *Consider also* references printed under several headings
6. Function words which imply the concept in mind (THINKING for BRAIN, DIGESTION for DIGESTIVE SYSTEM)
7. Terms for techniques which imply the concept in mind (ELECTROCARDIOGRAPHY for HEART)
8. Synonyms or near-synonyms (JOHNE'S DISEASE see PARATUBERCULOSIS)
9. Broader and narrower terms

The best way to find broader and narrower terms is by reference to the *MeSH Tree Structures* where terms are grouped into fifteen subject categories and arranged in a hierarchical manner with specific terms indented under the more general one. For example, in subcategory C14, under CARDIOVASCULAR DISEASES, many types of cardiovascular diseases, such as HEART DEFECTS, CONGENITAL are listed. Indented under that term are several even more specific terms. Thus, broader or narrower terms may be found merely by scanning these hierarchical lists.

The *Index Medicus* user generally starts with one or more medical terms in mind which express his or her own subject interest. If the user does not find a given term in the alphabetical list, examination of an appropriate "tree structure" may reveal a broader or more specific term under which the desired literature might have been indexed. When a usable term is found, examination of nearby entries in the alphabetic list may reveal related terms that are also worth searching in the *Index Medicus* Subject Section.

A system of 82 topical subheadings is available to subdivide the *MeSH* subject headings used in indexing each article. They afford a convenient means of grouping together those citations which pertain to a particular aspect of a subject. Of course, not every subheading is suitable for use with every subject heading. A given subheading is used only with certain subject headings, as listed in the Introduction of *Medical Subject Headings*. Two examples of subheadings are:

(1) "anatomy & histology"—used with organs, regions, and tissues for normal descriptive anatomy and histology and for the normal anatomy and structure of animals and plants.

(2) "diagnostic use"—used with chemical compounds, drugs, and physical agents when these substances are used for studies of clinical function of an organ, or for the diagnosis of human or animal diseases.

In some cases a concept expressed by a MeSH heading/subheading combination is better represented by a different heading. In those cases, a reference to the preferred heading is printed.

ACCIDENTS
prevention & control see ACCIDENT PREVENTION

SUBJECT HEADING CHANGES

MeSH is revised and updated each year. A copy is distributed with the January issue of *Index Medicus*, and is also included in the first part of each *Cumulated Index Medicus*. It should be available to every *Index Medicus* user.

A given volume of *Index Medicus* contains only the subject headings for which there are appropriate citations in that volume—and cross-references to those subject headings. *MeSH* contains an alphabetic list of all allowable subject headings and cross-references, including those which may not be represented by citations in any given volume of *Index Medicus*.

Beginning in January 1991, the use of *see under* cross-references for *MeSH* and *Index Medicus* was discontinued. Only the *see* cross-references have been retained. All *see under* cross-references have been elevated to full-fledged subject headings and citations may now be found under these entries when appropriate.

Annually new subject headings are added and old ones deleted. The additions serve to provide logical places to look for newly emerging concepts, or they provide more specificity in expanding subject fields. In some cases they may replace older, less currently acceptable terminology for established concepts. Subject headings are deleted if they are concerned with subjects that are so rarely written about that they no longer merit a separate heading, or if they have been replaced by more up-to-date headings.

All additions and deletions are listed in the Introduction of *Medical Subject Headings* and in Book 1 of *Cumulated Index Medicus*.

In the annual *MeSH* revisions, the Library attempts to maintain a balance between flexibility and stability. Although it is preferable to have a dynamic thesaurus responsive to current changes in terminology as reflected in the indexed literature, the Library is aware that changes create problems for those who follow a subject in *Index Medicus* from year to year and for the many medical libraries that use *MeSH* subject headings in their catalogs. There is, therefore, a reluctance to introduce headings that offer only slight improvement or represent transient interests. There is also an effort to avoid fine distinctions that may be understood by only a limited group of users within a given subject field.

The Library's subject headings tend to follow—rather than anticipate—the usage in the literature. When possible, preference is given to terminology that has the support of major professional organizations, with the realization that few such authorities attain universal acceptance.

ARRANGEMENT

Subject Section

Each article cited in *Index Medicus* is printed under one or more subject headings, and the entry appears in full under each.

Journal Articles:

Each entry contains the following elements, in order: original English title of article, or English translation of title in brackets; first author (if more than one) or sole author; journal title abbreviation; date of issue; volume number; issue, part or supplement; inclusive pagination; the notation Eng. Abstr. for those non-English articles which provide an abstract in English; and an abbreviation indicating the language of the article if other than English. For the names of as many as twenty-five authors in a citation, refer to the Author Section. The journal title abbreviation is in boldface type; the full journal title may be found in the *List of Journals Indexed in Index Medicus*.

Examples of typical journal article citations:

> The post-transcriptional regulator Rex of the human T-cell leukemia virus type I is present as nucleolar speckles in infected cells. Nosaka T, et al. **Exp Cell Res** 1995 Jul;219(1):122-9

cited under CELL NUCLEOLUS/VIROLOGY; GENE PRODUCTS, REX/BIOSYNTHESIS; HIV-1/METABOLISM; HTLV-I/METABOLISM; LYMPHOCYTES/VIROLOGY; and NUCLEAR PROTEINS/METABOLISM.

Left aortic arch and right descending aorta—interruption or severe coarctation of the aortic arch in the newborn. Korbmacher B, et al. **Cardiovasc Surg** 1995 Feb;3(1):73-7

cited under AORTA/SURGERY; AORTA, THORACIC/ABNORMALITIES; AORTIC COARCTATION/SURGERY; and BLOOD VESSEL PROSTHESIS.

Order of Citations:

Citations listed in *Index Medicus* are arranged alphabetically by *MeSH* subject heading. Under each subject heading, the articles are grouped together in the following manner:

(1) general articles to which no subheading has been assigned;

(2) articles which are listed under the appropriate subheadings.

Under each subject heading or subheading, the entries are grouped according to the original language of the text, with the English-language items appearing first, followed by citations for works published in other languages, arranged alphabetically by language. Within each language group, the articles are alphabetically ordered by journal title abbreviation.

Overall Citations:

When an issue of a serial contains a sequence of articles having a unifying theme, a citation may be created to lead readers to the sequence as a whole. These overall citations are made for proceedings of major national and international conferences and for abstracts of proceedings. The latter are labeled "Abstracts" in the title but are not indexed individually. No authors' names appear on overall citations.

Example of overall citation when individual articles are indexed:

10 Years of research on porcine derived lung surfactant. Proceedings and abstracts of the 10th International Workshop on Surfactant Replacement. Versailles, France, May 14-16, 1995. **Biol Neonate** 1995;67 Suppl 1:1-92

Examples of individual citations included with the above overall:

Potential role of surfactant proteins A and D in innate lung defense against pathogens. van Golde LM **Biol Neonate** 1995;67 Suppl 1:2-17

Pathophysiology and treatment of surfactant protein-B deficiency. Hamvas A, et al. **Biol Neonate** 1995;67 Suppl 1:18-31

Overview of clinical trials comparing natural and synthetic surfactants. Halliday HL **Biol Neonate** 1995;67 Suppl 1:32-47

Example of overall citation when individual items are abstracts:

[24th Scientific meeting of the German Association for Child and Adolescent Psychiatry and Psychotherapy. Wurzburg, 26-29 April 1995. Abstracts] **Z Kinder Jugenpsychiatr** 1995 Apr; 23 Suppl 1:1-218

Retractions:

When an article is retracted in the journal in which it was originally published, the retraction is cited under the heading RETRACTION OF PUBLICATION [Publication Type]. (Publication Type is a rubric introduced in 1991 to indicate the nature of a publication rather than its subject matter.) Beginning with 1989 indexing, the original article is also amended – with the heading RETRACTED PUBLICATION.

Original article (RETRACTED PUBLICATION [Publication Type])

Heparin binding site, conformational change, and activation of antithrombin [retracted by Evans DL, Marshall CJ, Christey PB, Carrell RW. In: Biochemistry 1995 Mar 14;34(10):3478] Evans DL, et al. **Biochemistry** 1992 Dec 22;31(50): 12629-42

Retracting article (RETRACTION OF PUBLICATION [Publication Type])

Heparin binding site, conformational change, and activation of antithrombin [retraction of Evans DL, Marshall CJ, Christey PB, Carrell RW. In: Biochemistry 1992 Dec 22;31(50):12629-42] Evans, DL, et al. **Biochemistry** 1995 Mar 14; 34(10):3478

Errata:

When a published erratum is printed in a subsequent issue of the journal in which an article appeared originally, the citation is amended to include reference to the publisher's correction.

Antidiabetic and hypolipidemic effects of S-methyl cysteine sulfoxide isolated from Allium cepa Linn [published erratum appears in Indian J Biochem Biophys 1995 Apr;32(2):111] Kumari K, et al. **Indian J Biochem Biophys** 1995 Feb;32(1): 49-54

Commentary:

When comments on a published article appear in the same or a subsequent issue of the journal in which the paper originally appeared, both the original and the commenting citations are amended to indicate the presence of commentary.

Original article **(Comment in)**

Comparison of standardized echography with magnetic resonance imaging to measure extraocular muscle size [see comments] Demer JL, et al. **Am J Ophthalmol** 1994 Sep 15;118(3):351-61

Commenting article **(Comment on)**

Comparison of standardized echography with magnetic resonance imaging to measure extraocular muscle size [letter; comment] Harrie RP **Am J Ophthalmol** 1995 Mar;119(3):383-4

Author Section

Author:

Effective with articles published in 1996, the National Library of Medicine increased the number of author names in *Index Medicus* from 10 to 25. If there are more than 25 authors for an article, the 25 names listed will be the first 24 named authors and the last author in the sequence. All authors listed between the 24th and the final author will be represented by "et al." Names from non-Roman alphabets are transliterated (see below under Title) and Chinese and Japanese names are given as shown in the journal. The complete citation is printed only under the first author's name; names of the second through the twenty-fifth author are cross-referenced to the full citation under the first author's name, thus:

Sonenshine DE; Ratzlaff RE; Troyer J; Demmerle S; Demmerle ER; Austin WE; Tan S; Annis BA; Jenkins S. Borrelia burgdorferi in eastern Virginia: comparison between a coastal and inland locality. Am J Trop Med Hyg 1995 Aug;53(2):123-33

Title:

The author is followed by the title of the article in the vernacular, and then the other bibliographic elements as they appear in the Subject Section (described above). The title of the article is supplied in brackets in translated form only (as in the Subject Section), and not in the vernacular, for citations in the following languages: Arabic, Armenian, Chinese, Georgian, Hebrew, Japanese, Korean, Persian, and Thai. Titles in the following languages are transliterated into Roman script: Bulgarian, Greek, Russian, Serbo-Croatian, and Ukrainian.

Example of title in the vernacular:

Ruffa G, Valente V, Sbolgi P, Cariati M, Arcuri V, Grandinetti A, Nigro M. Ipertensione nefrovascolare: autotrapianto renale bilaterale con ricostruzione dell'arteria mediante vena safena autologa. Minerva Pediatr 1995 Apr;47(4):141-5 (Eng. Abstr.) **(Ita)**

Name of Individual as Subject:

Articles about individuals are cited in the Author Section with the subject's name enclosed in parentheses and preceding the other components of the entry. A separate entry is also provided under the name of the author in the usual manner. An anonymous biography or obituary will appear only under the subject's name.

(Guthrie EH), Friedman M. Maryland physicians who helped make medical history: a portrait of Eugene H. Guthrie, M.D. Md Med J 1995 Jul; 44(7):535-7

Anonymous Non-English Citations:

A separate subsection is provided at the end of the Author Section for anonymous non-English language references. Special treatment is accorded the material in order to have an authentic reference to the work in the original language form. In this subsection, the journal article entries are arranged alphabetically under the journal title abbreviation.

Bibliography of Medical Reviews

From 1955 through 1987, the Library defined medical reviews as well-documented surveys of the recent biomedical literature. In response to user requests, the Library broadened this definition in 1988 to encompass reviews of current thinking on a given subject, regardless of the age of the literature cited, and to include categories of material previously excluded. Types of articles now considered to be reviews include academic, classical or exhaustive reviews; tutorial, didactic or subject reviews; multicase or epidemiologic reviews; consensus conferences; reviews of reported, known or published cases; and state-of-the-art reviews.

Materials with the following characteristics are *not* considered as reviews: case reports or original research articles containing a review of the literature as an adjunct; statistical and epidemiological surveys; bibliographies which comprise only a list of references; historical articles; monthly summaries of a subject area which appear as a regular feature in journals; and theses.

Citations to reviews are included in the "Bibliography of Medical Reviews" section of the monthly *Index Medicus* and *Cumulated Index Medicus*, as well as in the Subject Section and Author Section of each. In the latter sections, users can distinguish review articles from standard citations by the number of references shown in parentheses at the end of the source. "0 ref." indicates that the bibliographic references were not printed in the article.

ACCESS TO ARTICLES CITED

Users of *Index Medicus* who wish to consult articles are advised to use the following sources:
1. Reprints of articles: these are frequently available directly from the author or publisher.
2. Medical libraries: many will either have the material on hand, or know where it can be obtained through interlibrary loan.

INTERLIBRARY LOAN POLICY

Most of the literature in the general and historical collections of the National Library of Medicine (NLM) is available for interlibrary loan to any library. NLM does not loan directly to individuals. Libraries should send requests via DOCLINE®, NLM's automated ILL request and referral system, through the National Network of Libraries of Medicine™ (NN/LM™). Requests should be sent directly to NLM only for those titles not held in NN/LM libraries. The statement "Not Available in Region" must appear on the interlibrary loan request. The Regional Medical Libraries (RMLs) have established lending procedures for their regions. To reach your RML, phone 1-800-338-RMLS. (See NLM Fact Sheet, National Network of Libraries of Medicine.) Loans requested from NLM must comply with the instructions in this policy and with the provisions of the National Interlibrary Loan Code of the American Library Association (ALA).

Methods of Borrowing

Requests will be accepted via the following methods:

1. DOCLINE, using the following Library Identification (LIBID) numbers:
   20209A-general collection
   20209C-general collection, Clinical Emergency
   20209B-historical collection
2. ALA or IFLA Interlibrary Loan Request Forms
3. Internet: ill@nlm.nih.gov
4. Telefacsimile: (301) 496-2809

Inquiries regarding ILL policy, practice and information pertaining to specific requests may be sent to the ILL internet address or the ILL fax number.

All requests for material to be photocopied must include the applicable statement of conformance to either the U.S. Copyright Act of 1976 (CCL) or Copyright Guidelines (CCG). Requests for loans of audiovisuals must include the CLL statement.

- Requests must include the authorizing person's name (if sent by electronic transmission) or the signature of the authorizing person at the borrowing library (if the form is sent by mail).
- NLM requires that a requesting library include its LIBID number and complete address on each request. The LIBID may be obtained by searching the DOCUSER® database on the MEDLARS® system or by contacting the appropriate Regional Medical Library.
- Each item or item segment (chapter, part of issue, etc.) must be requested separately.
- Citations verified in NLM publications or NLM databases should include NLM call numbers. The call number is identified by 02NLM in CATLINE® and recently printed catalogs and 04NLM or DNLM in catalogs printed before January 1983. NLM's CATLINE, SERLINE® and AVLINE® databases are accessible via the Locator system. To access Locator, set terminal emulation to VT100, telnet to *locator.nlm.nih.gov* and enter *locator* (in lower case letters) at the login: prompt.
- Give source of verification whenever possible, stating the specific NLM database containing the citation and the MEDLINE® or SERLINE unique identifier. Requests not verified or those which do not contain the summary of sources searched will not be processed.
- It is not possible for NLM to cancel a request once it is received.

Forms of Loans

Material will be provided in the original form, as a photocopy, or in microform. The form will be determined by NLM. Literature in the collection printed before 1914 is usually loaned in the form of microfilm or photocopy. These materials are available from the History of Medicine Division (HMD). Audiovisual titles are available for loan. Pre-1970 audiovisuals are available from HMD. Computer-Assisted Instruction (CAI) materials are not loaned. (See NLM Fact Sheet, Access to Audiovisual Materials.) NLM will accept DOCLINE requests for transmission of materials via Ariel and fax. Ariel and fax requests must contain a complete citation, the ariel address or facsimile phone number, an office telephone number, the complete address and LIBID number of the borrowing library.

Clinical Emergencies

To request fax transmission for emergency patient care requests, the CLINICAL EMERGENCY requirement must be indicated on the request. DOCLINE participants should prefix these requests to NLM at LIBID 20209C. During the hours the Library is open, these requests will be filled within 2 hours. If NLM is unable to fill the request, notification will be transmitted within 2 hours.

NLM will refer requests when *Refer On* is indicated as a comment on an electronically transmitted request or at the top of an ALA or IFLA form. Requests must be within the scope of the NLM collection, not available at NLM, carry complete citation information and be identified as held by another library.

The loan period for original material, microfilm and audiovisuals is one month, not including transit time. No renewals are granted.

Libraries with overdue items will be billed for lost materials after two overdue notices have been sent. Interlibrary loan service will not be provided to delinquent accounts.

Delivery and Returns

NLM will pay postage for outgoing loans. The borrowing library will pay postage for the return of borrowed materials; is responsible for material from time of receipt until returned and received at NLM; will replace materials lost or irreparably damaged, and meet repair cost for damaged materials. For the protection of the borrowing library, it is suggested that materials be insured or registered and that a return receipt be requested.

- Return post-1913 printed materials, post-1969 audiovisuals, and pre-1914 microfilm to the Collection Access Section. Return pre-1970 audiovisuals to the History of Medicine Division.
- Pack materials properly for return, and inspect all materials to ensure that all parts, including guides are returned. Protect corners and edges of books well and mail unbound materials flat. *Do not reuse NLM's jiffy bag*. Audiovisual materials should not be returned in fiber jiffy bags.

International Requests

Materials in the original form will not be loaned outside the U.S. International libraries may submit requests throught their MEDLARS Center. If the item is not available from the MEDLARS Center and the Center does not have access to DOCLINE, international libraries may send requests to the ILL internet address, fax number, or by mail.

Charges

- U.S. libraries — $8.00 for each filled interlibrary loan in the form of a photocopy or loan of a book, audiovisual, or microfilm.
- There is a $3.00 surcharge for photocopies provided via telefacsimile.
- International libraries — $10.00 (U.S.) for each filled interlibrary loan in the form of a photocopy.
- Federal libraries — NLM will provide service free of charge to most federal libraries if the requesting library has complied with NN/LM policy for routing of interlibrary loan requests. Special arrangements will be made with high volume requestors.
- Do not send payment with the loan request. Invoices will be issued quarterly by the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, Virginia 22161 and are payable to NTIS. Libraries are *expected* to establish a deposit account with NTIS to facilitate payment. Coupons are not accepted as payment for these charges. Interlibrary loan service will not be provided to libraries with delinquent accounts.
- Please keep a copy of each loan request form returned with each item. The loan request number appears on the summary page of the invoice and is needed to interpret the invoice charges. NLM is unable to provide a second copy at the end of each quarter.

Special Photographic Services

Photographs or slides of portraits, prints, charts, and other pictorial work require special procedures. Write to: Prints and Photographs Collection, History of Medicine Division (address below) for information and costs. Orders requiring copyright owner's permission will not be accepted unless accompanied by this permission in writing.

PREFACE

The 1996 issue of *Medical Subject Headings (MeSH ®)* is presented as the primary listing of subject descriptors which appear in *Index Medicus* ®.

As in previous years, citations will be found in *Index Medicus* only under those subject headings that appear in large type in this version of *MeSH*. In prior years, there were three kinds of cross-reference appearing in small type in this *MeSH* and *Index Medicus*, "see", "see related", and "see under" references. Beginning with the 1991 issue, the "see under" type reference was eliminated and all former references were upgraded to full-fledged headings under which citations may now be found. A note printed under each such heading indicates its former status and the broader heading where citations would be located in earlier years. Not only will this change provide a more meaningful division of the subject matter, but it will permit a more consistent representation of material in all NLM products that make use of MeSH for subject access.

Health science users who have direct online access to the MEDLINE ® data base will find the annotated version of *MeSH* better suited to their needs. The annotated *MeSH* contains geographic headings, "check tags," such as male, female, and human, and other data elements that are of value to the MEDLINE searcher, but are not used in *Index Medicus*. The *Medical Subject Headings Annotated Alphabetic List* is available through the National Technical Information Service, U.S. Department of Commerce, 5285 Port Royal Road, Springfield, Virginia 22161.

The Library is grateful to the many scientists who have commented on various terms in *MeSH* and have made suggestions for its improvement. They thus assist the Library in its efforts to keep abreast of knowledge in the expanding fields of the health sciences.

MeSH INTRODUCTION

The 1996 *MeSH* is the current authority list for the subject analysis of biomedical literature at the National Library of Medicine. It presents the subject headings under which all citations will appear in *Index Medicus*, serves as the basis for search formulations in retrieval of bibliographic citations stored in the MEDLARS ® (Medical Literature Analysis and Retrieval System) computer files, and is the standard subject heading list for the cataloging of books and audiovisuals in the Library. This edition of *MeSH* is designed particularly for the needs of *Index Medicus* users. Also included is introductory material of special interest to medical librarians.

Medical Subject Headings is divided into two sections: Alphabetic List and Tree Structures.

ALPHABETIC LIST

The Alphabetic List section contains the subject headings arranged in alphabetic order with cross-references.

In selecting terms as subject headings, the most commonly used forms of English expressions are generally preferred. The *MeSH* user must also consider various related expressions. Thus, a user who is interested in lungs may also wish to consider looking for terms containing the word roots pulmo- and pneumo-. To assist in this process, **consider also** references have been established for many terms to suggest additional possibilities in locating concepts. The **consider also** references denote the presence of linguistically related concepts. At the heading KIDNEY, for example, the reference reads "consider also terms at GLOMERUL-, NEPHR-, PYEL-, and RENAL."

The subject headings have been constructed primarily for the convenience of the user of *Index Medicus*. Therefore, direct natural-language sequence is not always used. When a group of terms share a basic concept, they are arranged alphabetically under that concept and not scattered throughout the alphabet. For example, tuberculosis in its various forms and relationships is expressed by a series of headings starting with TUBERCULOSIS (TUBERCULOSIS, AVIAN; TUBERCULOSIS, BOVINE; TUBERCULOSIS, CARDIOVASCULAR).

Criteria for selection of subject headings include frequency of term usage in the medical literature; recognition of need for the concept by various users of *MeSH*; recommendation by advisory panels on terminology; and the extent to which the concept is relatively clear and precise.

Citations will be found in *Index Medicus* only under the *MeSH* headings that appear in large type. All other entries in the Alphabetic List are cross-references, leading the user, directly or indirectly, to appropriate *Index Medicus* headings.

Cross-references are of two kinds:

Referring to another term	Corresponding "referred from" designation
see	X
see related	XR

For example:

LUTEINIZING HORMONE see LH

LH
X LUTEINIZING HORMONE

The "see" cross-references were originally conceived of as synonyms for the headings to which they referred. However, we now have in *MeSH* a number of see cross-references that cannot be considered synonyms of headings yet do not merit the status of main heading. For example, CADUCEUS is a "see" cross-reference to the more general heading EMBLEMS AND INSIGNIA.

The "see related" reference is used primarily to indicate related headings not occurring in the same subcategory of the MeSH Tree Structures (see below). These headings may refer the user to citations related to the area of interest. However, the most obvious cross-references, such as those from an organ to its diseases, are avoided.

Up until 1991, a third cross-reference also existed in MeSH, the "see under" reference. These were used to refer from a more specific term to a more general term and were created to avoid fragmenting concepts and forcing users to use several different headings to find relevant information. Through the years, however, the steady growth in the volume of literature covered and the increased knowledge in many areas (e.g., molecular biology and immunology) necessitated a re-examination of this policy. Thus, beginning in 1991, the designation and use of "see under" references were discontinued and all former "see under" references became headings.

A heading may be followed by a history note. The note begins with the year the heading entered the system as an *Index Medicus* heading, unless the heading has been in use continuously since 1963. If there is more than one date, the first date given is the year of re-entry of a heading that had previously been deleted from the system. Where necessary, a range of dates is given.

The history note also traces changes in the heading and its cross-references. The kinds of headings with history notes include: 1) headings that existed previously as "see" or "see under" cross-references; 2) headings that existed previously in a different form (spelled differently, inverted, formerly singular, etc.); 3) headings now having "see" cross-references (shown under the heading following X) that existed previously as headings themselves or as cross-references to a different heading; 4) beginning in 1992, headings that existed previously as Supplemental Chemical Records. Supplemental Chemical Records form an auxiliary file in MeSH that contains records for chemicals and drugs encountered in the literature indexed for *Index Medicus* but not seen frequently enough to warrant creation of a full MeSH main heading.

Examples of headings with history notes:

Adrenal Cortex
78,63-67; was see under ADRENAL GLANDS 1968-77

The history note means that citations to articles on the adrenal cortex may be found in *Index Medicus* under ADRENAL CORTEX since 1978 and from 1963 through 1967; from 1968 through 1977 citations may be found under ADRENAL GLANDS.

Terfenadine
92; TERFENADINE was indexed under BENZHYDRYL COMPOUNDS 1978-91

The history note indicates that citations referring to this chemical may be found under BENZHYDRYL COMPOUNDS from 1978 through 1991.

History notes pertaining to cross-reference changes always appear with the heading to which they refer. For example, the history note for "SYNCHROCYCLOTRONS see CYCLOTRONS" is as follows:

Cyclotrons
93; was see PARTICLE ACCELERATORS 1978-92; SYNCHROCYCLOTRONS was see PARTICLE ACCELERATORS 1978-92
X Synchrocyclotrons

Each heading is followed by one or more alphanumeric expressions (tree numbers) that direct the user to the place or places in the Tree Structures where the term is to be found. A plus sign following a tree number in the Alphabetic List indicates there are indented terms in the Tree Structures at that number. As explained under TREE STRUCTURES below, prior to 1991, an indented term followed by an asterisk in the trees was a "see under" cross-reference in the Alphabetic List and therefore not an *Index Medicus* heading.

Headings may be subdivided by subheadings. These are discussed under SUBHEADINGS at the end of this section.

TREE STRUCTURES

The "trees" are lists in which the subject headings are divided into categories such as Anatomy (Category A), Organisms (Category B), etc. Most categories are further divided into subcategories, each of which is identified by an alphanumeric designation. Thus, B1 includes Invertebrates, B2 includes Vertebrates, etc. The *MeSH* terms in each subcategory are arranged hierarchically, in up to nine levels, from the most general to the most specific. Because of the branching structure of the hierarchies, these lists are sometimes referred to as "trees". Each *MeSH* term appears in at least one place in the trees, and may appear in as many additional places as may be logically appropriate.

Although National Library of Medicine staff have consulted numerous recognized sources in the process of developing the trees, these trees should not be regarded as representing an authoritative subject classification system. These are rather arrangements of terms for the guidance and convenience of persons who are assigning subject headings to or searching for literature in *Index Medicus* and in other National Library of Medicine products and databases. The trees are not an exhaustive classification of the subject matter but contain only those terms that have been selected for inclusion in this thesaurus. Their structure frequently represents a compromise among the views and needs of particular disciplines and users, in the absence of any single universally accepted arrangement.

Those who index articles for inclusion in MEDLARS are instructed to find and use the most specific *MeSH* term that is available to represent each indexable concept. For example, articles concerning Streptococcus pneumoniae will be found under the heading STREPTOCOCCUS PNEUMONIAE rather than the broader term STREPTOCOCCUS, while an article referring to a new streptococcal bacterium which is not yet in the vocabulary will be listed directly under STREPTOCOCCUS. Accordingly, the user of *Index Medicus* may consult the trees to find additional subject headings which are more specific than a given heading, and broader headings as well. For example, under ABNORMALITIES one can find specific abnormalities:

Abnormalities	C16.131
Abnormalities, Drug-Induced	C16.131.42
Abnormalities, Multiple	C16.131.77
Alagille Syndrome	C16.131.77.65
Angelman Syndrome	C16.131.77.95

In the trees, each term is followed by the number that indicates its tree location. It may also be followed by one or more additional numbers, in smaller type, and truncated at the third level, indicating other tree locations of the same term. The numbers serve only to locate the terms in each tree and to alphabetize those at a given tree level. They have no intrinsic significance; e.g., the fact that D12.775.641 and D12.644.641 both have the three digit group 641 does not imply any common characteristic.

Terms that were "see under" references in the Alphabetic List prior to 1991 appeared in the trees and were indicated by an asterisk. A user must bear in mind that citations concerned with these concepts did not appear in *Index Medicus* under these headings but may have been found under these terms in MEDLINE, the National Library of Medicine's computerized online citation retrieval system, and in some specialized MEDLARS recurring bibliographies. These terms were sometimes referred to as "minor descriptors."

The trees also contain some terms that are followed by the designation (NON MESH). These are included for the purpose of indicating the logical structure and have no other function for *Index Medicus* users. Non-MeSH terms are never used for indexing, and are not in the Alphabetic List. The trees also contain geographic headings (Category Z), which also do not appear in the Alphabetic List. These terms are not *Index Medicus* headings but may be used in searching MEDLINE.

Because this edition of *MeSH* is designed for users of *Index Medicus*, information used primarily in indexing, cataloging, and MEDLINE searching has been omitted. For these purposes, use of *Medical Subject Headings Annotated Alphabetic List, 1996* is recommended. This is available from:

National Technical Information Service
U.S. Department of Commerce

NEW HEADINGS & DELETIONS

Lists are provided of: (a) new headings which have been introduced with 1996 *MeSH*, together with the headings under which these concepts were previously indexed; (b) headings which have been deleted, with the subject headings that have replaced them; and (c) new headings, listed by previous headings under which they were indexed.

SUBHEADINGS

There are 82 topical subheadings used for indexing in conjunction with subject headings. Subheadings afford a convenient means of grouping together those citations which are concerned with a particular aspect of a subject. Of course, not every subheading is suitable for use with every subject heading. In the following subheadings, the heading categories in parentheses are to be used as a general guide to the descriptors permitted with the subheading. Most of the headings in a given subcategory are permitted but there may exceptions and there may be a few headings in subcategories not listed which are permitted with the heading. For more specific information on subheadings allowed with a given heading consult the annotation for the heading in *Medical Subject Headings Annotated Alphabetic List, 1996.*

abnormalities (A1-10, A13, A14, B2) - Used with organs for congenital defects producing changes in the morphology of the organ. It is used also for abnormalities in animals.

administration & dosage (D) - Used with drugs for dosage forms, routes of administration, frequency and duration of administration, quantity of medication, and the effects of these factors.

adverse effects (D, E1-4, E6, E7) - Used with drugs, chemicals, or biological agents in accepted dosage - or with physical agents or manufactured products in normal usage - when intended for diagnostic, therapeutic, prophylactic, or anesthetic purposes. It is used also for adverse effects or complications of diagnostic, therapeutic, prophylactic, anesthetic, surgical, or other procedures, but excludes contraindications for which "contraindications" is used.

agonists (D1-13, D15-23) - Used with chemicals, drugs, and endogenous substances to indicate substances or agents that have affinity for a receptor and intrinsic activity at that receptor.

analogs & derivatives (D3) - Used with drugs and chemicals for substances that share the same parent molecule or have similar electronic structure but differ by the addition or substitution of other atoms or molecules. It is used when the specific chemical heading is not available and no appropriate group heading exists.

analysis (D) - Used for the identification or quantitative determination of a substance or its constituents and metabolites; includes the analysis of air, water, or other environmental carrier. It excludes the chemical analysis of tissues, tumors, body fluids, organisms, and plants for which "chemistry" is used. The concept applies to both methodology and results. For analysis of substances in blood, cerebrospinal fluid, and urine the specific subheading designating the fluid is used.

anatomy & histology (A1-10, A13, A14, B2, B6) - Used with organs, regions, and tissues for normal descriptive anatomy and histology, and for the normal anatomy and structure of animals and plants.

antagonists & inhibitors (D1-13, D15-23) - Used with chemicals, drugs, and endogenous substances to indicate substances or agents which counteract their biological effects by any mechanism.

biosynthesis (D6, D8, D9, D11-13, D24) - Used for the anabolic formation of chemical substances in organisms, in living cells, or by subcellular fractions.

blood (B2, C, D1-24, F3) - Used for the presence or analysis of substances in the blood; also for examination of, or changes in, the blood in disease states. It excludes serodiagnosis, for which the subheading "diagnosis" is used, and serology, for which "immunology" is used.

blood supply (A1-6, A8-10, A13, A14, C4) - Used for arterial, capillary, and venous systems of an organ or region whenever the specific heading for the vessel does not exist. It includes blood flow through the organ.

cerebrospinal fluid (B2, C, D1-24, F3) - Used for the presence or analysis of substances in the cerebrospinal fluid; also for examination of or changes in cerebrospinal fluid in disease states.

chemical synthesis (D2-23, D25, D26) - Used for the chemical preparation of molecules in vitro. For the formation of chemical substances in organisms, living cells, or subcellular fractions, "biosynthesis" is used.

chemically induced (C1-20, C22, C23, F3) - Used for diseases, syndromes, congenital abnormalities, or symptoms caused by chemical compounds in man or animals.

chemistry (A2-16, B1, B3-6, C4, D1-4, D6-26) - Used with chemicals, biological, and non-biological substances for their composition, structure, characterization, and properties; also used for the chemical composition or content of organs, tissue, tumors, body fluids, organisms, and plants. Excludes chemical analysis and determination of substances for which "analysis" is used; excludes synthesis for which "chemical synthesis" is used; excludes isolation and purification of substances for which "isolation & purification" is used.

classification (A11, A15, B, C, D, E1-4, E6, E7, F3, G1, G2, I2, I3, J, M, N2-4) - Used for taxonomic or other systematic or hierarchical classification systems.

complications (C, F3) - Used with diseases to indicate conditions that co-exist or follow, i.e., co-existing diseases, complications, or sequelae.

congenital (C1-12, C14, C15, C17, C19-23) - Used with disease headings to indicate those conditions existing at, and usually before, birth. It excludes morphologic abnormalities and birth injuries, for which "abnormalities" and "injuries" are used.

contraindications (D, E1-4, E6, E7) - Used with drugs, chemicals, and biological and physical agents in any disease or physical state that might render their use improper, undesirable, or inadvisable. Used also with contraindicated diagnostic, therapeutic, prophylactic, anesthetic, surgical or other procedures.

cytology (A2-10, A12-16, B1, B3, B5, B6) - Used for normal cellular morphology of unicellular and multicellular organisms.

deficiency (D8) - Used with endogenous and exogenous substances which are absent or in diminished amount relative to the normal requirement of an organism or a biologic system.

diagnosis (C, F3) - Used with diseases for all aspects of diagnosis, including examination, differential diagnosis and prognosis; excludes mass screening for which "prevention & control" is used. Excludes radiographic diagnosis for which "radiography" is used; excludes scintigraphic diagnosis for which "radionuclide imaging" is used; excludes ultrasonic diagnosis for which "ultrasonography" is used.

diagnostic use (D) - Used with chemical compounds, drugs, and physical agents when these substances are used for studies of clinical function of an organ, or for the diagnosis of human or animal diseases.

diet therapy (C, F3) - Used with disease headings for dietary and nutritional management of the disease. The concept does not include vitamin or mineral supplements, for which "drug therapy" may be used.

drug effects (A2-16, B1, B3-6, D8, D12, G4-11) - Used with organs, regions, tissues, or organisms and physiological and psychological processes for the effects of drugs and chemicals.

drug therapy (C, F3) - Used with disease headings for the treatment of disease by the administration of drugs, chemicals, and antibiotics. For diet therapy and radiotherapy, use specific subheadings. Excludes immunotherapy and treatment with biologicals for which "therapy" is used.

economics (C, D, E1-4, E6, E7, F3, G1, G2, I2, I3, J, N2-4) - Used for the economic aspects of any subject, as well as for all aspects of financial management. It includes the raising or providing of funds.

education (G1, G2, M) - Used for education, training programs, and courses in various fields and disciplines, and for training groups of persons.

embryology (A1-10, A13, A14, B2, B6, C) - Used with organs, regions, and animal headings for embryologic and fetal development. It is used also with diseases for embryologic factors contributing to postnatal disorders.

enzymology (A2-16, B1, B3-6, C, F3) - Used with organisms, except vertebrates, and with organs and tissues. It is also used with diseases for enzymes during the course of the disease, but excludes diagnostic enzyme tests, for which "diagnosis" is used.

epidemiology (C, F3, Z) - Used with human and veterinary diseases for the distribution of disease, factors which cause disease, and the attributes of disease in defined populations; includes incidence, frequency, prevalence, endemic and epidemic outbreaks; also surveys and estimates of morbidity in geographic areas and in specified populations. Used also with geographical headings for the location of epidemiologic aspects of a disease. Excludes mortality for which "mortality" is used.

ethnology (C1-21, C23, F3, Z) - Used with diseases and selected terms for ethnic, cultural, anthropological, or racial aspects, and with geographic headings to indicate the place of origin of a group of people.

etiology (C, F3) - Used with diseases for causative agents including microorganisms and includes environmental and social factors and personal habits as contributing factors. It includes pathogenesis.

genetics (B, C, D6, D8, D11-13, D24, F3, G4-11) - Used for mechanisms of heredity and the genetics of organisms, for the genetic basis of normal and pathologic states, and for the genetic aspects of endogenous chemicals. It includes biochemical and molecular influence on genetic material.

growth & development (A1-10, A13, A14, B) - Used with microorganisms, plants, and the postnatal period of animals for growth and development. It includes also the postnatal growth or development of organs or anatomical parts.

history (C, D, E1-4, E6, E7, F3, F4, G1, G2, I1-3, J, M, N2-4) - Used for the historical aspects of any subject. It includes brief historical notes but excludes case histories.

immunology (A2-16, B, C, D1-24, F3, G4-11) - Used for immunologic studies of tissues, organs, microorganisms, fungi, viruses, and animals. It includes immunologic aspects of diseases but not immunologic procedures used for diagnostic, preventive, or therapeutic purposes, for which "diagnosis", "prevention & control", or "therapy" are used. The concept is also used for chemicals as antigens or haptens.

injuries (A1-10, A13, A14, B2) - Used with anatomic headings, animals, and sports for wounds and injuries. Excludes cell damage, for which "pathology" is used.

innervation (A1-5, A7, A9, A10, A13, A14) - Used with organs, regions, or tissues for their nerve supply.

instrumentation (E1-4, G1, G2) - Used with diagnostic or therapeutic procedures, analytic techniques, and specialties or disciplines, for the development or modification of apparatus, instruments, or equipment.

isolation & purification (B3-5, D) - Used with bacteria, viruses, fungi, protozoa, and helminths for the obtaining of pure strains or for the demonstration of the presence of or

identification of organisms by DNA analyses, immunologic, or other methods, including culture techniques. It is used also with biological substances and chemicals for the isolation and purification of the constituents.

legislation & jurisprudence (G1, G2, I2, I3, M, N2-4) - Used for laws, statutes, ordinances, or government regulations, as well as for legal controversy and court decisions.

manpower (G1, G2) - Used with disciplines and programs for the demand, supply, distribution, recruitment, and use of personnel.

metabolism (A2-16, B, C, D, F3) - Used with organs, cells and subcellular fractions, organisms, and diseases for biochemical changes and metabolism. It is used also with drugs and chemicals for catabolic changes (breakdown of complex molecules into simpler ones). For anabolic processes (conversion of small molecules into large), biosynthesis is used. For enzymology, pharmacokinetics, and secretion use the specific subheadings.

methods (E1-4, G1, G2) - Used with techniques, procedures, and programs for methods.

microbiology (A, B1, B2, B6, C, F3) - Used with organs, animals, and higher plants and with diseases for microbiologic studies. For parasites, "parasitology" is used; for viruses, "virology" is used.

mortality (C, E1-4, F3) - Used with human and veterinary diseases for mortality statistics. For deaths resulting from various procedures statistically but for a death resulting in a specific case, use FATAL OUTCOME, not /mortality.

nursing (C, E1-4, F3) - Used with diseases for nursing care and techniques in their management. It includes the nursing role in diagnostic, therapeutic, and preventive procedures.

organization & administration (G1, G2, I2, N2) - Used for administrative structure and management.

parasitology (A, B1, B2, B6, C, F3) - Used with animals, higher plants, organs, and diseases for parasitic factors. In diseases, it is not used if the parasitic involvement is implicit in the diagnosis.

pathogenicity (B1, B3-5) - Used with microorganisms, viruses, and parasites for studies of their ability to cause disease in man or animals.

pathology (A1-11, A13-16, C, F3) - Used for organ, tissue, or cell structure in disease states.

pharmacokinetics (D1-23, D25, D26) - Used for the mechanism, dynamics and kinetics of exogenous chemical and drug absorption, biotransformation, distribution, release, transport, uptake and elimination as a function of dosage, extent and rate of metabolic processes.

pharmacology (D) - Used with drugs and exogenously administered chemical substances for their effects on living tissues and organisms. It includes acceleration and inhibition of physiological and biochemical processes and other pharmacologic mechanisms of action.

physiology (A, B, D8, D12, D13, D24, G4-11) - Used with organs, tissues, and cells of unicellular and multicellular organisms for normal function. It is used also with biochemical substances, endogenously produced, for their physiologic role.

physiopathology (A1-10, A13, A14, C, F3) - Used with organs and diseases for disordered function in disease states.

poisoning (D) - Used with drugs, chemicals, and industrial materials for human or animal poisoning, acute or chronic, whether the poisoning is accidental, occupational, suicidal, by medication error, or by environmental exposure.

prevention & control (C, F3) - Used with disease headings for increasing human or animal resistance against disease (e.g. immunization), for control of transmission agents, for prevention and control of environmental hazards, or for prevention and control of social factors leading to disease. It includes preventive measures in individual cases.

psychology (C, E1-4, F3, I3, M) - Used with non-psychiatric diseases, techniques, and named groups for psychologic, psychiatric, psychosomatic, psychosocial, behavioral, and emotional aspects, and with psychiatric disease for psychologic aspects; used also with animal terms for animal behavior and psychology.

radiation effects (A, B1, B3-6, D, G4-11) - Used for effects of ionizing and nonionizing radiation upon living organisms, organs and tissues, and their constituents, and upon physiologic processes. It includes the effect of irradiation on drugs and chemicals.

radiography (A, C, F3) - Used with organs, regions, and diseases for x-ray examinations. It does not include radionuclide imaging for which "radionuclide imaging" is used.

radionuclide imaging (A, C, F3) - Used for radionuclide imaging of any anatomical structure, or for the diagnosis of disease.

radiotherapy (C) - Used with disease headings for the therapeutic use of ionizing and nonionizing radiation. It includes the use of radioisotope therapy.

rehabilitation (C1-21, C23, E4, F3) - Used with diseases and surgical procedures for restoration of function of the individual.

secondary (C4) - Used with neoplasms to indicate the secondary location to which the neoplastic process has metastasized.

secretion (A2-16, C4, D6, D8, D11, D13) - Used for the discharge across the cell membrane, into the intracellular space or ducts, of endogenous substances resulting from the activity of intact cells of glands, tissues, or organs.

standards (D1-23, D25, D26, E1-4, E6, E7, F4, G1, G2, I2, J, N2-4) - Used with facilities, personnel, and program headings for the development, testing, and application of standards of adequacy or acceptable performance and with chemicals and drugs for standards of identification, quality, and potency. It includes health or safety standards in industries and occupations.

statistics & numerical data (E1-4, E6, E7, F4, G1, G2, I2, I3, M, N2-4) - Used with non-disease headings for the expression of numerical values which describe particular sets or groups of data. It excludes manpower distribution for which "manpower" is used and excludes supply or demand for which "supply & distribution" is used.

supply & distribution (D1-23, D25, D26, E7) - Used for the quantitative availability and distribution of material, equipment, health services, personnel, and facilities. It excludes food supply and water supply in industries and occupations.

surgery (A1-10, A13, A14, B2, C, F3) - Used for operative procedures on organs, regions, or tissues in the treatment of diseases, including tissue section by lasers. It excludes transplantation, for which "transplantation" is used.

therapeutic use (D) - Used with drugs, biological preparations, and physical agents for their use in the prophylaxis and treatment of disease. It includes veterinary use.

therapy (C, F3) - Used with diseases for therapeutic interventions except drug therapy, diet therapy, radiotherapy, and surgery, for which specific subheadings exist. The concept is also used for articles and books dealing with multiple therapies.

toxicity (D) - Used with drugs and chemicals for experimental human and animal studies of their ill effects. It includes studies to determine the margin of safety or the reactions accompanying administration at various dose levels. It is used also for experimental studies of exposure to environmental agents.

transmission (C1-3, C22) - Used with diseases for studies of the modes of transmission.

transplantation (A2, A3, A5-11, A13-16) - Used with organs, tissues, or cells for transplantation from one site to another within the same subject, or from one subject to another of the same species or different species.

trends (E1-4, E6, E7, G1, G2, I2, I3, N2-4) - Used for the manner in which a subject changes, qualitatively or quantitatively, with time, whether past, present, or future. It excludes discussions of the course of disease in particular patients.

ultrasonography (A, C, F3) - Used with organs and regions for ultrasonic imaging and with diseases for ultrasonic diagnosis. Does not include ultrasonic therapy.

ultrastructure (A2-11, A13-16, B1, B3-6, C4, D8, D12) - Used with tissues and cells (including neoplasms) and microorganisms for microanatomic structures, generally below the size visible by light microscopy.

urine (B2, C, D1-24, F3) - Used for the presence or analysis of substances in the urine, and also for the examination of, or changes in, the urine in disease.

utilization (E1-4, E6, E7, N2) - Used with equipment, facilities, programs, services, and health personnel for discussions, usually with data, of how much they are used. It includes discussions of overuse and underuse.

veterinary (C1-21, C23, E1-4, E6, E7) - Used for naturally occurring diseases in animals, or for diagnostic, preventive, or therapeutic procedures used in veterinary medicine.

virology (A, B1-3, B5, B6, C, F3) - Used with organs, animals, and higher plants and with diseases for virologic studies. For bacteria, rickettsia, and fungi, "microbiology" is used; for parasites, "parasitology" is used.

USE OF MEDICAL SUBJECT HEADINGS FOR CATALOGING

The National Library of Medicine uses *MeSH* as the authoritative source for the subject cataloging of books, serials, and audiovisual materials cited in AVLINE ® and CATLINE ®.

In addition to the topical subheadings used for indexing (listed in the previous section) catalogers may use the following topical subheadings with headings in categories C, E, F, and G4-12:

in adolescence	in middle age
in adulthood	in old age
in infancy & childhood	in pregnancy

In cataloging, a *MeSH* heading may also be modified by form, geographic, and language subheadings. These are listed below. When more than one type of subheading is used with a heading, the subheadings are listed in a fixed order: topical, geographic, form, language. Geographic subdivision is always direct.

Headings that may be subdivided geographically include those for the specialties (e.g., MEDICINE, SCIENCE, DENTISTRY, etc.) and those that have the topical subheadings "economics," "education," "epidemiology," "ethnology," "history," "manpower," "mortality," "prevention & control," "standards," "supply & distribution," "trends," or "utilization," or the form subheadings "directories," "legislation," or "statistics." Directories of specialists in the field are given the specialty heading subdivided by the geographic subheading and the form subheading "directories." A history of the practice in one locality is given the specialty heading subdivided by "history" and the geographic subheading.

Additional headings that may be subdivided geographically are annotated as such in *Medical Subject Headings Annotated Alphabetic List, 1996*. The annotated publication also contains scope notes for the form subheadings and other annotations used in cataloging.

NEW HEADINGS—1996

A new heading either represents a completely new concept - with no directly corresponding heading in 1995 *MeSH*, or it replaces a heading which was deleted for 1996. In either case the previously-indexed-under heading was used before 1996 to index material now covered by the new heading. The previously-indexed-under heading is followed by a date or range of dates as a guide to the period of time in which it was used for the concept in *Index Medicus*. Therefore, a previously-indexed-under heading may not be in current use but will apply to the dates given. Note, however, that the beginning date is often established by searching the online databases, and thus may be later than the time period for *Index Medicus*.

If a new heading replaces an existing heading, the new heading is following by an asterisk.

New Heading	*Previously-Indexed-Under Heading*
Acecainide*	Acetylprocainamide (91-95) Procainamide (80-90)
Acupressure	Acupuncture Points (90-95) Pressure (83-95)
Acute-Phase Proteins*	Acute Phase Proteins (87-95)
Almshouses	
alpha-Fetoproteins*	alpha Fetoproteins (77-95) Fetal Globulins (75-76)
Alpha-Globulins*	Alpha Globulin (65-74) Alpha Globulins (75-95)
alpha-Macroglobulins*	alpha Macroglobulins (76-95)
Ancitabine*	Cyclocytidine (91-95) Cytarabine (77-90)
Anthracyclines	
Anti-Allergic Agents	Histamine H1 Antagonists (66-95)
Anti-Asthmatic Agents	Asthma/drug therapy (66-95)
Antibiotic Prophylaxis	Antibiotics/therapeutic use (66-95) Postoperative Complications (66-95) Premedication (73-95) Surgical Wound Infection (66-95)
Antibiotics, Tetracycline	Tetracyclines (76-95)
Antibodies, Blocking	
Antibody-Dependent Enhancement	
Antigens, CD1	Antigens, CD (90-95) Antigens, Differentiation (88-91) T-Lymphocytes (88)
Antigens, CD5	Antigens, CD (90-95) Antigens, Differentiation (90-91)
Antigens, CD7	Antigens, CD (90-95) Antigens, Differentiation, T-Lymphocyte (88-95)

National Health Planning and Resources Development Act of 1974	Health Planning
Pituitrin	Pituitary Hormones, Posterior
Polycyclic Compounds	Polycyclic Hydrocarbons
Protein-Bound Iodine Test	Thyroid Function Tests
Rochalimaea	Bartonella
Rochalimaea Infections	Bartonella Infections
Shoulder-Hand Syndrome	Reflex Sympathetic Dystrophy
Skid Row Alcoholics	Homeless Persons
Sudeck's Atrophy	Reflex Sympathetic Dystrophy

NEW HEADINGS—BY PREVIOUS INDEXING—1996

To allow users to see the previously existing headings affected by new headings, the following list is alphabetically arranged by the 1995 headings which have been replaced or further subdivided by a new heading.

The existing heading is in the left column and the new heading is in the right. If a new heading is a one-to-one replacement of an existing heading, the new heading is followed by an asterisk.

EXAMPLES:

Antigens, CD	Antigens, CD14

"Antigens, CD" remains as a heading, but the more specific heading "Antigens, CD14" was introduced in 1996. Citations concerning "Antigens, CD14" that previously would have been listed under "Antigens, CD" will no longer appear under that term but will be listed under the specific term "Antigens, CD14" in the 1996 *Index Medicus*.

Lipotropic Factors	Lipotropic Agents*

In 1995 citations on this concept appeared under " Lipotropic Factors." This term was replaced by " Lipotropic Agents" for 1996.

BIBLIOGRAPHY

The following texts are those that are referred to regularly by staff of the Medical Subject Headings Section in the creation and maintenance of MeSH. Some of those listed are considered authorities for their fields (e.g., *Gray's Anatomy*, *Bergey's Manual of Systematic Bacteriology*), while others are utilized as reference works in certain subject areas. It should be noted that this bibliography does not represent the entire breadth of texts that are used for the production of MeSH.
